

NAVI TECHNOLOGIES LIMITED

Navi Technologies Limited is a technology-first financial services company on a mission to make money simple for millions of Indians. Founded by Sachin Bansal and Ankit Agarwal, Navi leverages data, engineering, and design to deliver intuitive, efficient, and affordable financial products to India's digitally connected population.

Headquartered in Bengaluru, Navi operates across key verticals including lending, general insurance, asset management, and UPI payments. Through its wholly-owned NBFC, Navi Finserv, the company provides personal and home loans with fast digital onboarding and paperless disbursal. Navi General Insurance offers health insurance products designed to be transparent, easy to understand, and instant to buy or claim. In the mutual fund space, Navi AMC offers a growing suite of index funds aimed at retail investors seeking low-cost, long-term exposure to Indian and global markets. Navi also operates one of India's fastest-growing UPI platforms, currently among the top four in the country by transaction volume (per NPCI data).

What sets Navi apart is its full-stack approach - building and owning its tech infrastructure end-to-end. This enables high speed, operational efficiency, and deep product innovation. The company also operates with a long-term view, prioritizing product-market fit, cost discipline, and regulatory alignment.

The company continues to scale rapidly while maintaining its core focus: making financial services simple, affordable and accessible. As India's digital financial ecosystem matures, Navi aims to be a defining force in its evolution.
